

ALUMINIUM POLES

with bracket and hoisting system

ALUMINIUM pole with bracket and hoisting system

Conical pole in anodised aluminium equipped with the banner hoisting system that DESCHAMPS has patented internationally. A crank is used to action the halyard.

RESEARCH & DEVELOPMENT

The RESEARCH AND DEVELOPMENT department at DESCHAMPS SA is responsible for incorporating all possible improvements to the company's products in terms of :

- Durability
- Resistance
- Design
- User-friendliness
- Cost

Our technicians have state-of-the-art computer and manufacturing equipment at their disposal; they are in constant contact with educational institutions specialising in composite materials; and they play an active role in professional circles boasting the best engineers in the profession. They are therefore capable of studying any project to create a new product for the hollow bodies industry in the widest sense.
