

GRP POLES

TRADITION RANGE

Poles with bracket and halyard inside

The idea ?

A halyard inside the pole, connected to an aluminium cleat that supports the banner, which fits into the moulded, glass fibre-reinforced polyester bracket.

The advantage ?

No need to lay the pole down each time the banner is changed – which saves time and wear-and-tear on the banner, reduces personnel costs, enhances safety and allows for a wider choice of position.
